USER GUIDE // v1.1.0

ZEROTWO

The screen time blocker that knows when you're in class.

Android 8.0+ · Kotlin + Jetpack Compose · Firebase

01 · OVERVIEW

WHAT IS ZEROTWO?

ZeroTwo is an Android app that blocks social apps **while you're in class**, automatically. It reads your lecture schedule from your calendar (or a built-in timetable), puts a block screen over Instagram, TikTok, Facebook, Snapchat, YouTube and X when a class starts, and lets them go when it ends. Outside class you decide, and a screen-time leaderboard shows how you compare with your batch.

ADVANTAGES

AUTOMATIC

No willpower or remembering required. Blocking starts with the lecture and stops when it ends, every day, without touching the phone.

KNOWS YOUR REAL SCHEDULE

Reads your actual calendar, so moved or extra lectures are covered. A keyword filter (e.g. "lecture") keeps gym or lunch events from blocking.

HARD TO DODGE MID-LECTURE

During class the blocked-apps list can only grow, not shrink. It restarts after a reboot and survives being swiped away.

MOTIVATING, NOT JUST STRICT

Daily and 7-day screen time per app, plus a department & batch leaderboard where the lowest screen time wins.

PRIVATE BY DESIGN

It sees only which app is open, never what's on screen. From your calendar it reads times and titles, read-only. Classmates see just the last 2 digits of your ERP.

LIGHT AND FREE TO RUN

No custom server: Firebase handles sign-in and the leaderboard. Demo mode even works fully offline.

WHO IT'S FOR

Students who want to stop reflex-scrolling in lectures. **Faculty and departments** who want a focus tool that respects privacy and runs on students' own phones, with no extra hardware or server.

02 · GETTING STARTED

SET UP IN THREE MINUTES

01 **Install the APK**
Open ZeroTwo-v1.1.0.apk and allow "Install unknown apps" for your browser or file manager when Android asks. Needs Android 8.0 or newer.

02 **Grant the permissions**
The setup screen lists each switch with a GRANTED / NOT GRANTED badge. Tap a card, flip the switch in Settings, come back: it re-checks by itself.

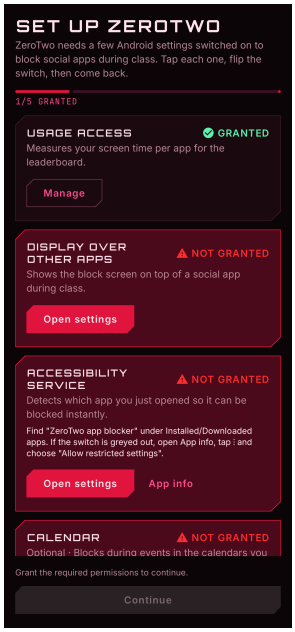

03 **Sign in with your ERP**
Enter your 5-digit ERP and pick your department and batch. This puts you on the right leaderboard.

04 **Follow the tutorial**
A one-minute walkthrough: try a demo class first, then connect your calendar.

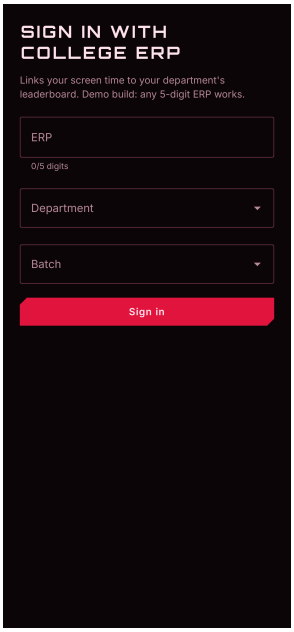

PERMISSIONS AND WHY THEY'RE NEEDED

Permission	What it's for	Required?
Usage access	Measuring screen time, and a backup way to see which app is open	Yes
Display over other apps	Showing the block screen on top of a blocked app	Yes
Accessibility service	Noticing instantly which app you opened (package name only)	Yes
Calendar	Blocking during events in the calendars you pick (read-only)	Optional
Ignore battery optimization	Stops Android from killing the blocker in the background	Recommended

Accessibility switch greyed out? On Android 13+, apps installed from a file need one extra tap: App info › three-dot menu › Allow restricted settings. The setup card has an App info button for this.

PERMISSION SETUP

ERP SIGN-IN

03 · THE TUTORIAL, PART 1

SEE IT WORK: THE DEMO CLASS

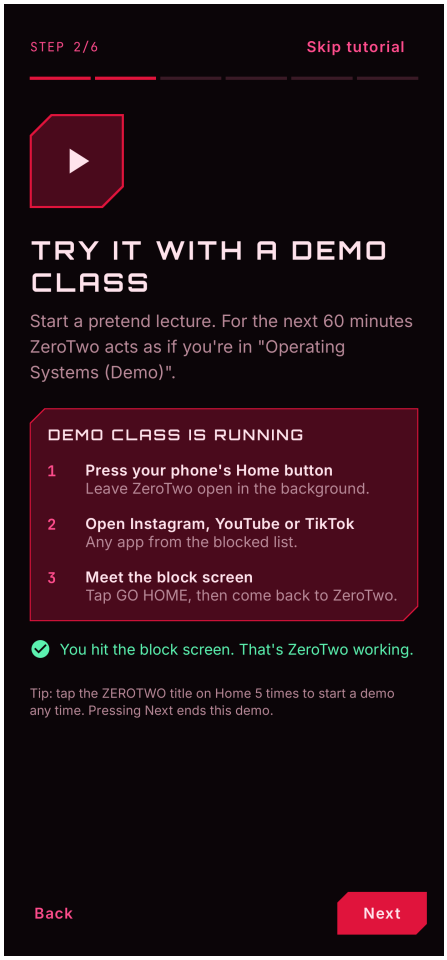

The tutorial starts by showing, not telling. One tap starts a pretend 60-minute lecture called "Operating Systems (Demo)" so you can feel the block before setting anything up.

01 **Tap "Start demo class"**
The shield turns on, exactly as if a real lecture had just begun.

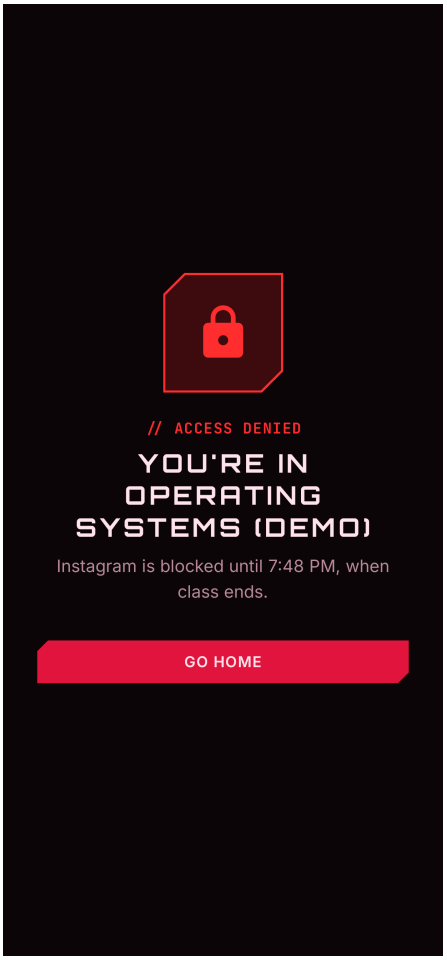

02 **Press Home and open Instagram, YouTube or TikTok**
Any app from the blocked list will do.

03 **Meet the block screen**
"You're in Operating Systems (Demo)", how long it lasts, and a GO HOME button. Back also goes home.

04 **Come back to ZeroTwo**
The tutorial ticks **You hit the block screen**. Pressing Next ends the demo, so nothing stays blocked by accident.

TUTORIAL · DEMO RUNNING

THE BLOCK SCREEN

Shortcut for presentations: tap the ZEROTWO title on Home 5 times to start a demo class any time. A "Demo · tap to end" chip appears next to the title; the leaderboard also fills with sample classmates.

04 · THE TUTORIAL, PART 2

MAKE IT REAL: CONNECT YOUR CALENDAR

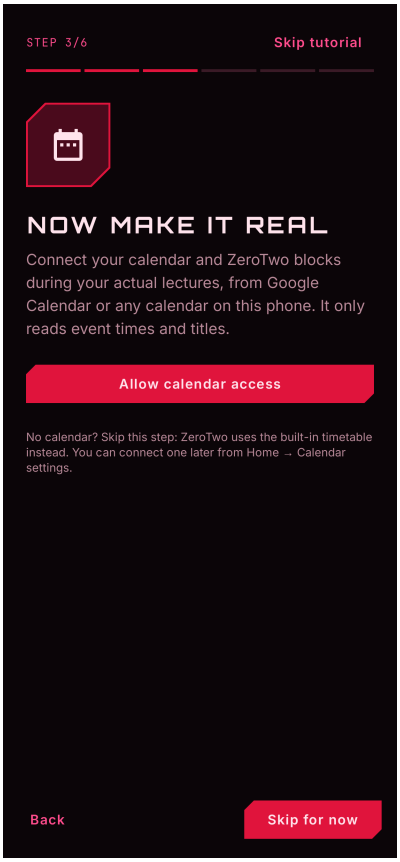

With calendar access, ZeroTwo blocks during your **actual** lectures from Google Calendar or any calendar on the phone. It only reads event times and titles, and never changes anything.

01 **Tap "Allow calendar access"**
Android shows its usual permission dialog. If you denied it before, the button opens ZeroTwo's settings page instead.

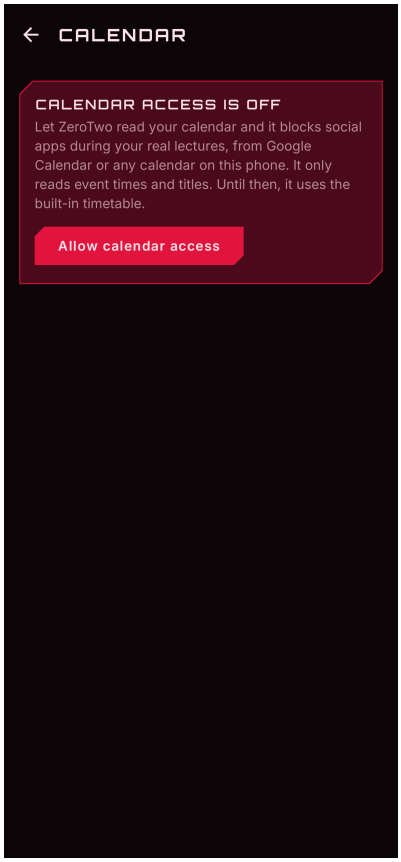

02 **Choose your class calendar**
Tick the calendar that holds your lectures. Only ticked calendars count as class time.

03 **Optional: add a keyword**
For example "lecture" or "class". Then only events whose title contains it will block. Leave it empty to count every event in the ticked calendars.

04 **All-day events**
Ignored by default, so holidays and birthdays don't block a whole day. There's a switch if you want them.

TUTORIAL · CONNECT CALENDAR

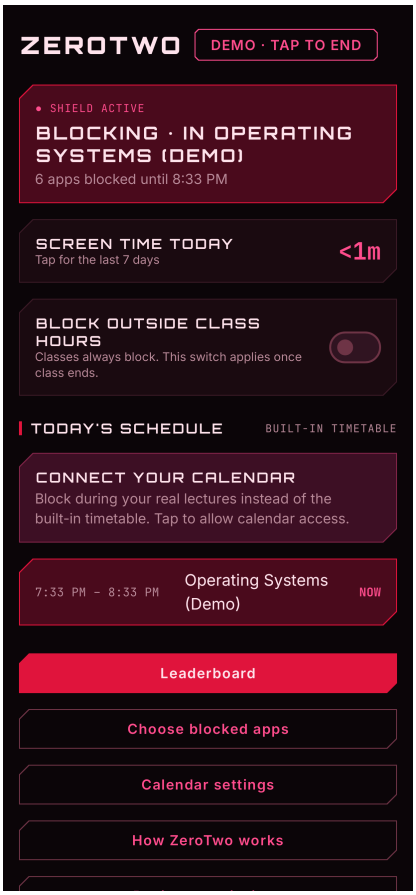

CALENDAR SETTINGS

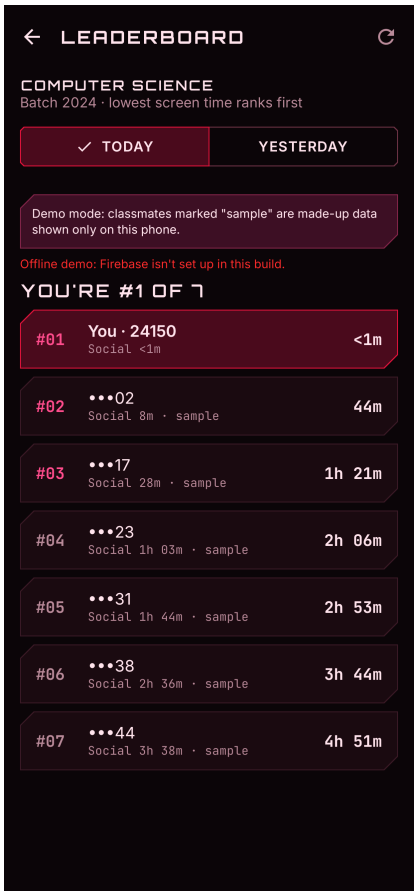

No calendar? Skip the step. ZeroTwo then uses the built-in timetable, and you can connect a calendar later from Home › Calendar settings. Calendar edits apply within seconds, no restart needed.

05 · EVERYDAY USE

YOUR HOME SCREEN AND LEADERBOARD

HOME DURING A CLASS

LEADERBOARD

STATUS CARD

SHIELD ACTIVE or IDLE, why (which class or event), and until when.

SCREEN TIME TODAY

Tap it for the 7-day chart and time per app. Social apps are tagged.

BLOCK OUTSIDE CLASS HOURS

The manual switch for study time. Classes always block, whatever it says.

TODAY'S SCHEDULE

From your calendar or the timetable (the tag says which). The current class is marked NOW.

CHOOSE BLOCKED APPS

Six social apps are on by default. During class you can add apps but not remove them.

LEADERBOARD

Your department and batch, today or yesterday, lowest screen time first.

06 · TIPS & QUESTIONS

GOOD TO KNOW

WHEN DOES ZEROTWO BLOCK?

Situation	What happens
Demo class running	Blocks, and the block screen names the demo class
Calendar connected and a matching event is on	Blocks: "You're in [event title]" until it ends
No calendar connected, timetable class on	Blocks: "You're in [course]"
No class, "Block outside class hours" on	Blocks until you switch it off
No class, switch off	Nothing is blocked

TROUBLESHOOTING

01 **The block screen doesn't appear**
Home › Review permissions: all three required cards should say GRANTED. On Xiaomi, Oppo, Vivo and similar phones, also allow Autostart and "Display pop-up windows while running in background" in App info.

02 **It stopped after a restart**
It restarts on its own after a reboot or update. If not, open ZeroTwo once.

03 **My lecture didn't block**
Check Home › Calendar settings: is the calendar ticked, and does the event title contain your keyword? The "Blocks today" list previews what will block.

04 **The leaderboard shows only me**
Classmates appear once they use the app in the same department and batch.

PRIVACY IN ONE PARAGRAPH

ZeroTwo reads which app is in front (its package name), never your screen. From your calendar it reads event titles and times, read-only, only from calendars you tick. The leaderboard receives your ERP, department, batch and daily totals, nothing else, and classmates see only the last two digits of your ERP. In this hackathon build the college ERP sign-in is mocked: any 5-digit ERP is accepted.

Replay the tutorial any time: **Home › How ZeroTwo works**.
